CS-INDEX — Composites Standards Master List

Doc ID	CS-INDEX
Revision	G
Effective date	2026-08-29
Maintained by	Composites Lead (update at the moment any standard changes status, CS-000 §7)

Depth key: **Drafted** means full procedure, follow it as written (pending approver signature). **Outlined** means all sections present, procedure steps stubbed; complete before first use in anger.

Doc ID	Title	Rev	Status	Depth	Motivating pain point(s)
CS-000	Documentation Standards, Template & Revision Process	C	Draft, pending signature	Drafted	PP-09
CS-001	Part, Mold & Material Labeling	F	Draft, pending signature	Drafted	PP-09, PP-10
CS-002	Layup Schedule Specification & Recording	E	Draft, pending signature	Drafted	PP-04, PP-07
CS-003	Mold Design & Manufacturing	D	Draft, pending signature	Drafted	PP-03; SN4 lessons
CS-004	Mold Sealing, Release & Surface Prep	D	Draft, pending signature	Drafted	PP-01
CS-005	CNC Machining of Tooling Board (ShopSabre)	E	Draft, pending signature	Drafted	PP-06; Z-plunge incidents
CS-006	Resin Infusion	C	Draft, pending signature	Drafted	Leak-risk minors; G0 review findings
CS-007	Wet Layup & Vacuum Bagging	C	Draft, pending signature	Drafted (photos at first SN6 use)	Clamp/bagging minors
CS-008	Resins, Mixing & Cure Schedules	D	Draft, pending signature	Drafted	FCF resin starvation; exotherm safety; cure holds
CS-009	Trimming, Sanding & Finishing of Cured Composites	C	Draft, pending signature	Drafted (photos at first SN6 use)	Catch-can puncture; PPE

Doc ID	Title	Rev	Status	Depth	Motivating pain point(s)
CS-010	CF Grounding & Electrical Bonding	C	Draft, pending signature	Drafted	PP-05
CS-011	Inventory, Storage & Transport	D	Draft, pending signature	Drafted (storage-map locations to field-verify)	PP-02, PP-10
CS-012	Purchasing & Reimbursement (Composites)	F	Draft, pending signature	Drafted (re-verify tiers/names each fall)	PP-02, PP-08
CS-013	Work Orders & Part Traceability	F	Draft, pending signature	Drafted	PP-09; bridges to the WO system

Notes: every standard flips to Released only when the SN6 Composites Lead signs its approval table (CS-000 §7.1); the doc header and this index change together. Next free number: **CS-014**. 2026-07-28: every doc above got a language pass (fewer em dashes, less decorative bold) plus targeted accuracy fixes, most substantively CS-013 (now describes the live Firebase app, not the retired offline `work-orders.html`), CS-005 (a dated web cross-check + a sharpened certified-operator caveat), and CS-011 (a note tying it to the app's Stock tab). 2026-08-01: CS-008 → Rev C, adding the FEB hold column to the resin table and §5.1 explaining it; the work-order app now blocks a demould step until that hold elapses, and the standard had been stating only the datasheet figures. 2026-08-27: CS-013 and CS-001 → Rev D together, for the R&D build — a part that is real carbon on a real deadline but is not a season deliverable. CS-013 §4 defines it and §7.1 says when to mark it; CS-001 §4 and §7.6 place the mark on the label's ID line and state outright that it is **not** a class word, so the class-word list is unchanged and TEST PANEL keeps its single meaning. An R&D record enforces exactly like any other — it is the opposite of a retro record in that respect — and the ID never carries the distinction, so a build can be moved into the season without a relabel. 2026-08-28: every standard took an engineering pass at Simon's request, and the series gained drawn figures. CS-000 Rev C defines the normative verbs (shall/should/may) the whole series now reads by and records where figures live (`src/figures/`, SVG source, PNG rendered by `tools/render_figures.mjs`). Twelve standards carry a figure; CS-007 and CS-009 came out of outline into full procedures (their numbers were already in Rev B, only unpacked), and CS-008's §7 dropped a stale "(outline)" label. No process rule changed anywhere: the pass was structure, language and figures, which is why every history row says so. 2026-08-29: CS-001, CS-002 and CS-013 (plus the CS-013 figure) caught up with the app's v4.0.0 R&D bench: a coupon is its own record `CPN-SNx-###` under a study `RDS-SNx-###`, both carry QR labels, and bench coupons run without work orders while R&D parts keep full enforcement; the retired `PNL-…-Cnn` spelling survives only on frozen SN5-era records. CS-012 dropped its "Why not more" printer paragraph at Simon's request, so the standard no longer rules printer types in or out. Later the same day, CS-012 → Rev F: the "Model choice" paragraph left §7.8 as well, so the request names one model and argues against none.
